What is Dbuntu App?

Dbuntu App is a herd management system that allows you to track your animals easily and regularly in dairy and beef farms. Dbuntu App offers the most suitable management opportunities for your operations, thanks to its special modules for dairy and beef farms. It stores and analyzes your data in the areas you need. In the Dbuntu App, where you can monitor your animals individually or in groups, you can view your reports with a single click.

Dbuntu App does not require any setup on your farm. You can easily use the system with a computer over the internet, and with a mo- bile phone via mobile application. In this way, you can access your data from anywhere, and you do not run the risk of losing your data with the cloud system.

Integrate Easily!

Easily migrate all your animals to the new system with Dbuntu App's animal registration system. Whether you are a software installed on your computer or an Excel user, you can easily move all your old data to your new system.
